

Water Cooling

The water cooling option keeps the CC or CC "Plus" motor cool during operation. The water cooling option is installed by removing the top cover, the water cooling jacket is installed over the top cover, the water cooling jacket is then soldered into place. The water circulation tubes are flexible and can be shaped to the user desires. This option can be purchased when the motor is manufactured. It can also be added on later by sending the motor to Carlisle for installation.
